

Issues with your water?

## THE GOOD NEWS IS THAT IT'S TREATABLE

HALO Water Systems is helping to protect the health and safety of the nation. Regardless of what your water issues are, HALO has a full set of solutions to treat them.

# HALO 5 SOLVES

## CHLORINE PROBLEMS

Research has found a direct link between chlorine and copper plumbing corrosion. Chlorine and chloramines also damage rubber seals and gaskets.

# HALO 5 SOLVES

## HARD WATER PROBLEMS

Inhibits mineral build-up on fixtures and appliances, dissolves existing scale and inhibits corrosion, chemical free.

\_\_\_\_\_ THE CHOICE IS YOURS \_\_\_\_\_

*“You can **BE** a filtration system, or **BUY** a filtration system.”*

## HOW IT WORKS

### 1. Granular Activated Carbon (GAC)

NSF Certified acid-washed GAC for the general removal of chlorine, chloramines, gases, dyes, fuels, heavy metals, man-made pollutants, disinfectants, pesticides, TTHM, sodium hypochlorite, undesirable odors, undesirable taste and volatile organic contaminants. Our NSF/ANSI Certified GAC meets or exceeds all Food Chemical Codex, AWWA, ASTM and USP Standards.

### 2. High Activity Carbon (HAC)

HAC is an outstanding material for successfully reducing free chlorine from water supplies. The end product is clean, fresh water with no objectionable taste or odor characteristics. Additionally, HAC can be used for filtering waters having a wide range of pH levels and will impart a high “polish” to the filtered water. Our HAC is NSF/ANSI meets or exceeds NSF Standard 42.

### 3. HALO AG Plus

HALO Ag Plus is an all-natural, environmentally safe media with a large surface area and micro-porous structure. It is a highly efficient filter media for the reduction of suspended matter down to the 5 micron or less range and is thus, extremely effective at removing water turbidity. Our HALO Ag Plus meets or exceeds NSF/ANSI standards under NSF Standard 61.

### 4. High Density Filter Media

High Density Filter Media is a high hardness, high density granular filtration media that can effectively filter down to the 10-20 micron range. It also provides an excellent support bed for the other filtration media. Our High Density Filter Media meets AWWA specifications and meets or exceeds NSF/ANSI standards under NSF Standard 61

### 5. HALO ION In-line Water Conditioner

Our proprietary HALO ION 2.0 In-line Water Conditioner uses multi-reversing polarity permanent magnetic fields to alter the molecular structure of positively and negatively charged ions of dissolved calcium and magnesium. This causes the hard water minerals that would normally cause lime scale to stay suspended in the water instead of attacking pipes and appliances. The conditioned water also helps prevent corrosion due to scale and will dissolve existing scale over time. With a track record of over 50 years in use, the HALO ION In-line Water Conditioner is a proven, eco-friendly hard water treatment solution.

THE  
**HALO** ION

The HALO ION uses multi-reversing polarity permanent magnetic fields to effect the **ionic charge identity** of the  $\text{CaCO}_3$  and  $\text{MgCO}_3$  so that they remain suspended in the water rather than precipitate out as hard water scale. This is the essence of the **conditioned effect** delivered by the ION.
